Empalis Health Check

Optimize your backup infrastructure

How to get the most out of your data protection environment

The Empalis Health Check includes a comprehensive analysis of your entire data protection and archiving environment with regard to the fulfillment of all requirements and best practices.

We evaluate, document and assess all results of the analysis, taking into account previously defined criteria. Based on this evaluation, we develop recommendations for the optimization of your backup landscape and document it in a report for you.

Depending on the existing backup infrastructure, we provide Predatar Insights, Veeam ONE or other modern analytics tools to support the health check.
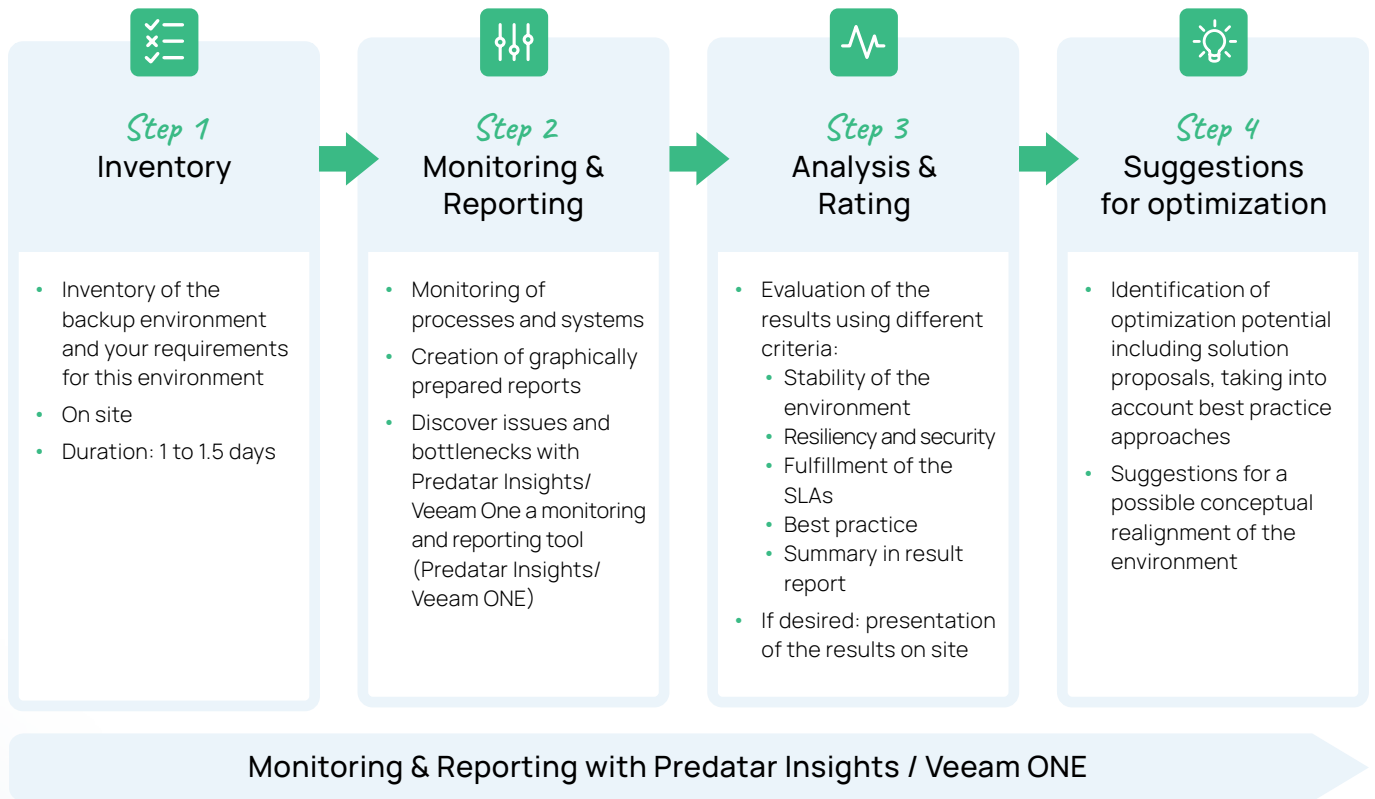

Health Check - why?

Existing IT infrastructures such as IBM Spectrum Protect and Veeam installations mostly serve their purpose, but there is often plenty of potential for optimization.

From time to time, it is good to have your systems and processes checked by independent viewers and to compare the ACTUAL with the desired status.

Companies continue to develop - and so should their IT landscapes.

✓ Is everything running smoothly?

✓ Are the systems technically up to date?

✓ What synergies and optimizations can be achieved to reach a better, more cost effective solution

✓ And what happens in the event of a crisis?

An overview of our approach

Step 1
Inventory

- Inventory of the backup environment and your requirements for this environment
- On site
- Duration: 1 to 1.5 days

Step 2
Monitoring & Reporting

- Monitoring of processes and systems
- Creation of graphically prepared reports
- Discover issues and bottlenecks with Predatar Insights/ Veeam One a monitoring and reporting tool (Predatar Insights/ Veeam ONE)

Step 3
Analysis & Rating

- Evaluation of the results using different criteria:
  - Stability of the environment
  - Resiliency and security
  - Fulfillment of the SLAs
  - Best practice
  - Summary in result report
- If desired: presentation of the results on site

Step 4
Suggestions for optimization

- Identification of optimization potential including solution proposals, taking into account best practice approaches
- Suggestions for a possible conceptual realignment of the environment

Monitoring & Reporting with Predatar Insights / Veeam ONE

Your benefits

- You will receive a comprehensive analysis and evaluation of your backup environment.
- We recognize optimization potential and develop implementation ideas taking into account best practices.
- We submit suggestions for a possible conceptual realignment of the environment.
- With Predatar Insights / Veeam ONE you get a modern analytics tool (monitoring & reporting) in the cloud, which you can continue to use after the health check.

Requirements for installing Predatar Insights / Veeam ONE

- Windows Server from 2012/2016/2019
- Predatar: Outgoing firewall activation on port 1753
- Veeam: connection to a virtualization platform

Do you have any questions oder would like to know more? We are happy to hear from you!
