

Check status.

Recognize potential.

Achieve goals.

## Empalis Health Check

We optimize your backup infrastructure for you.

---

### How to get the most out of your data protection environment.

The Empalis Health Check includes an analysis of your entire data protection environment according to different criteria.

As part of our health check, the data protection environment and archiving are subjected to a precise and comprehensive check with regard to the fulfillment of all requirements and best practices. The results of the analysis are evaluated by us, documented and assessed taking into account previously defined criteria. Based on this evaluation, we develop recommendations for the optimization of your backup landscape and formulate them in a report for you.

Depending on the existing backup infrastructure, we provide Predatar Insights, Veeam ONE or other modern analytics tools to support the health check.

---

### Health Check - why?

Existing IT infrastructures such as IBM Spectrum Protect installations mostly serve their purpose, but there is often plenty of potential for optimization.

Is everything working smoothly? Are the systems technically up to date?

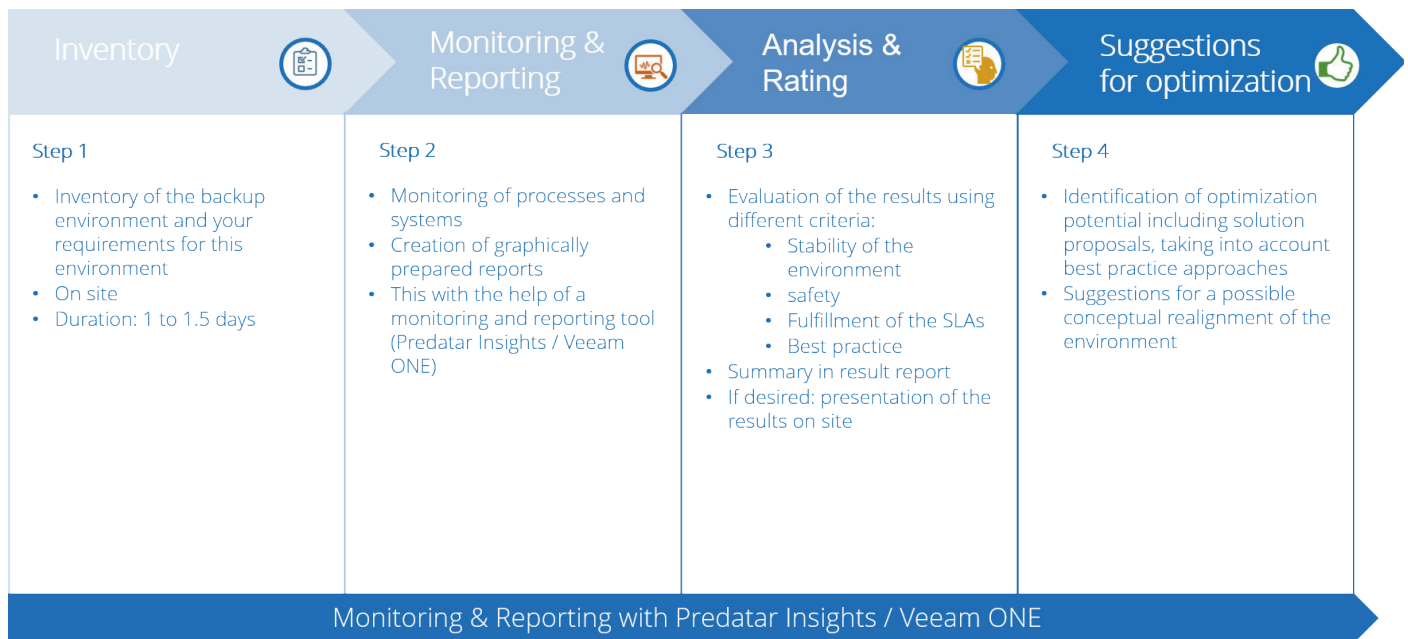

Is there perhaps a better / faster / cheaper solution in one place or another?

And what happens in the event of a crisis?

From time to time, it is good to have your systems and processes checked by independent viewers and to compare the ACTUAL with the desired status.

Companies continue to develop - and so should their IT landscapes.

## An overview of our approach

## Your benefits

- You will receive a comprehensive analysis and evaluation of your backup environment
- We recognize optimization potential and develop implementation ideas taking into account 'best practices'
- We submit suggestions for a possible conceptual realignment of the environment
- With Predatar Insights / Veeam ONE you get a modern analytics tool (monitoring & reporting) in the cloud, which you can continue to use after the health check

## Requirements for installing Predatar Insights / Veeam ONE

- Windows Server from 2012
- Predatar: Outgoing firewall activation on certain ports
- Veeam: connection to a virtualization platform

## Would you like to know more about our offer?

Do you have any questions or want to know more? We are happy to hear from you!
